

Abstract

An approval request communication terminal carried by a child, etc. has a program processor for performing the execution processing of various kinds of function programs.

5 When a predetermined condition is satisfied, the approval request communication terminal makes an approval request message of the execution processing of a function program, and transmits this approval request message to an approval processing communication terminal carried by a parent, etc.

10 When the approval processing terminal receives the approval request message, the approval processing terminal displays contents based on this message, and receives the input of a reply to this message, and makes an approval message based on the reply, and transmits this approval message to the

15 approval request terminal. When the approval request terminal receives the approval message, the approval request terminal controls the execution processing of the function program using the program processor in accordance with the contents of this approval message.
